It would be idin for the Democratic party as a party, to doey that the logic of the business alteation is electedly against us. Looking at it from any stand point, the Republican party as wayspers and speakers will have the ndvantage this fall. Although we do not concede all of the claims advanced by them, that to the change in the admissional is to be attributed all of the difficulties under which we are strengthing, there has been and is today, among husiness men, a deep-easted distruct of the turiff policy which has always dominated the southern and western wings of the Democratic party, and which, by the way, in too many instances, controls the policy of the party when an ore fortunate enough to gal a num a semiliance of political power in the mation. on the part of the laud department, this lidand is not under the control of any Lnown government.

This discovery was made by a man of the name of E. Brûmson, who squatted out the island about three years ago and then sought to file on the land as a hamestead. He was sent from one point in another trying to get it survayed, but met with nothing but disappointment at each turn. At length, after wearisome delay, the department at Washington sent word that it had no knawledge of any such piece of land within the borders of the United States. Brunson continues to squat and unaw defies the powers thet be to oust him. He is a bachelor and is the sole resident of the island, which contains about six acres. He has a small ranch, where he raises garlien truck, etc., and lives as independently as any of the proud potentates of Europe. At law tide Brunson can reach the mainland alang a low spit of and, but when the water comes in he is ent off from all communication with the outside world except by boat. This miniature kingdom is aioun 12 miles from Olympia, at the intersection of Big Skookum and Oyater bays. According to Brunson's first understanding, his kingdom was just over the line in Mason county. It seems, hawever, that the middle of the ciunnel le counted as the dividing line in tie beys as Pugets sound, and by this Brunson's kingdom is in Thurston county.

DO YOU THINK RHEUMATISM IS INCURABLE? A great many will answer, Wall, I kaya had it a long time and I have tried every thing that has come before my notice, and I still have it, and as lar as I am personally concerned it seems to me that I always will have it.

HAVE YOU EVER TRIED "RENOVIA?"

Some will answer and any "No," never heard of it. Others will say "Yes," but ident do me any good. Still others will say and have said Yes, I have not only tried it but am ready to tastify that it has belied use. Others will say, If I thought it would bely me I would try it. To those who have tried it and here not seemed to realise that it had believed them,

DID IT COST YOU ANYTHING TO TRY IT? No, it did not; all must hay that. To those who have tried it and seem to think that it did not halp tham

Are You Troubled With Rheumatism The person who can answer "No" to the above question has every reason to be truly thankful. There can be no possible doubt as to tha truth of this stetement. DO YOU THINK RHEUMATISM IS INCURABLE? A great many will answor, Wall, I have bad it a long time and I have tried every thing that has come before my notice, and I still hare it, and as far as I am personally concerned it seems to me that I always will have it.

HAVE YOU EVER TRIED "RENOVIA?"

Some will asswer and say "No;" never heard of it. Others will say "Yes," but didn't do me any good. Built others will say and heve said Yes, I have not only tried it but an ready to teelify that it has belied ine. Others will say, Il I thought it would help me I would try it. To those who have tried it end have not seemed to realise that it had halped them.

A Beacectal Action Attributed to Fhowing Gaus in Gentlaned Fevers.

The salivary glanis pluty quito an important part in contioued levers, yet they are not considered in the firealment of the case. Use of the first and most important retrictions in the parient-dietary is to drop all with food at the physician's first request, and just then the salivary glands legglo to lapse into a torquid condition, which very siten resolts in an inflammation and finally suppuration and that disagreeable dryness to the tongue and fances so onconfortable to the patient. For the relief of this trouble thus found nothing of so much importance as some site form of aromatic chewing game, which relieves the thirst and dry mouth, improve the appetite and dry gestion and restrains neuses, if any.

Hence some of the most disagreeable accompaniments of the disease an oriligated. I believe a daso that it materially aids the absorption of the medicine when the alluminary tract is so impaired by the lucessant lever. I do not claim originality in this treatment, although these unretround any reference to any thing of this kind, flowever, it may have been reparded as too claim picto open demention. Still it is, in my settimation, quite important in any continued fever, write; a physicion in The Medical lecond.

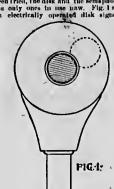

Electricity is Nervous Diseases. EDWARD T. JORDAN. Reservelly in Nerveu. Diseases.
In a recent address technolog a medical accisty Dr. I'. Peterson expressed binned as lastog not much faith to electricity for organic hervous diseases, but in thought it was often of benefit in many innectional nervous diseases, such as accorations and local spassus. And in the treatment of these he thought there was a great difference of influence between the two poles. Ha found that the negativa pole increased Regular Office Hours from 7 A. M. to 8 P. M. A Maw Edon in Runh Notes.

A new prioripia has been suggested in the manufacture of bank notes. The Juntariel World says that if a sheet of paper be plunged into a mixture of various color-ling meilers, each color will present a streaked appearance, each brand having a desinct color. It would be traposable to initiate these effects without an exact knowledge of how the mixture of colors was made. If a drep of the mixture of reduce sellowed to init on a cheet of paper, a number of rings, each having a determined elter and shade, will be developed, and thus initiation will be rendered more difficult.

against him to hit n mark 2 feet in dinni-ster once in als alota.

The revolver has n very short barrel at best, and the slightest dovintion to que side or the older in alghting will re-sult in a hopelessly wild alot. The short burrel, so to speak, canggerntes a miss, and the short distance between the eights makes it difficult to keep them lined. When onn once learns in aiming to keep his eights lined—i. c., the front eight di-rectly in the center of the noteh of the rear sights—in will find that the great stifficulty of revulver shooting is gone. It a nun mey waver and the end of the plated larrel describe ell sorth of para-bolas; but, provided ils sights are in perfect alignment, his chols will be sur-

perfect nilgament, his chole will be surprisingly close in the mark simed at, and
a certuin proportion will find the bullseye.

The great thing is to keep the revolver
alweys an integral part of the arm that
supports it. Grasp it firmly with the
palm of the land null eatend the thumb
in the direction of the barrel. The
thumb, by its pressure on the side of the
platel, keeps its asis in a perpendicular
plane parullel to that of the arm of the
chooter, so that at the mounent the lannmer is released son the cartridge eaploded like hellet will go in the direction
his arm is pointing. So important a
port does the thumb play in sighting
that it is hardly an easgyeration to say
thet a man without a thumb can never
hope in become a fine-slot.

In addition to the above, there is acother cause of inaccuracy in revolver
shooting that is not the fault of the
simoter, but is inherent in the weepon
itself. This cause is the tendency of the
abort burrel to kick up and as a result
to shoot high. It may be leasened by a
firm hold at the moment of firing, but
the best way, as a rule, is to experiment
with the pistol and then either have trresignted or hold under in chooting. Evrey one has noticed that the revolver as

SPECIMEN STONES.

Interesting Facts Abant Fina Cama That Are Exame to Few Healdes Experts.

"Hefore the existence of 'specimen stones' becomes, through the drain of tham to America, a thiog of the past for us to may be well to any a few words about things which very lew persons have ever seen and henceforward hava little chance of sering," remarks a London journal as prelude to the following rarely known facts: Tha words 'specimen close" explain that it is a gent of the ulmost perfection, but few know how rars and precious it is and how little it differs to the eye of any hul an expert from an ordinary example of Ila kind. Especimen clones are mascullon insuries. They are nover set, because over the most delicate setting might hids defects which would make them comparatively valuriess. The desire to passes them constitutes the last tullruity of nobleasen, for not only are they the most concentrating possible form of property, but the appreciation of them is a must exclosive form of culture. It may seem strange, but it is true, that there are probably out to persons in England who can tell a diamond worth \$100 a carat from one worth fits and twenty, and of these 50 not a desce are jewelers.

The trade in specimen stones is wholly to the hande of four or five great firms, and minor dealers, who have no custom for this class of grans, know almost as little about them as the laity. They have no opportunity for the occessory training, to train the eyear of practice, with soch rarity of opportunity as the market affords, to train the eyear of practice, with soch rarity of opportunity as the market affords, to train the eyear of practice, with soch rarity of opportunity as the market affords, to train the eyear of practice, with och rarity of opportunity as the market affords, to train the eyear of practice, with och rarity of opportunity as the market affords, to train the eyear of practice, to the purest water from an ordinary "Sue stone" demands a fitting and a belification of the purest water from an ordinary "Sue
